Duct silencer ø250 L=500

Reference arguments
Compact acoustic silencer with rectangular casing
and circular connections. It is due to the compact
dimensions especially suitable for installation above convertible ceiling units or
where space conditions are otherwise limited.
Constructed with a perforated inner tube and the acoustic insulation material is mineral wool. To avoid carryover of the mineral wool, a polyester fabric is placed between the
perforated tube and the mineral wool.
Tightness class C.
Ø250 - 500mm
