Duct silencer ø315 L=1000

Reference arguments
Compact acoustic silencer with rectangular casing
and circular connections. It is due to the compact
dimensions particularly suitable for installation above convertible ceiling units or
where space conditions are otherwise limited.
Built with a perforated inner pipe and the acoustic insulation material is mineral wool. To prevent the dragging of the mineral wool a polyester fabric is placed between the
perforated pipe and the mineral wool.
Tightness class C.
Ø315 - 1000mm
