

## 2027750

Duct silencer  $\varnothing$ 315 L=500

### Reference arguments

Compact acoustic silencer with rectangular casing and circular connections. It is due to the compact dimensions especially suitable for installation above convertible ceiling unit or where space conditions are otherwise limited.

Built with a perforated inner pipe and the acoustic damping material is mineral wool. To avoid the carry-over of the mineral wool, a polyester fabric is placed between the perforated pipe and the mineral wool.

Tightness class C.

$\varnothing$ 315 - 500mm
